Qualitative rationale examples

a) Correct high-confidence

True: adhd Pred.: adhd (1.00) [correct]

Yep. It **took** me years **to** go from knowing about **ADHD** **to** thinking that I **might** have **it, just because** I **knew** I **wasn't** hyperactive, so I couldn't possibly have something with hyperactive in the name, right?

b) Correct high-confidence

True: adhd Pred.: adhd (1.00) [correct]

not so great hack if student with adhd is elementary school aged, hyperfocuses on the school chromebook itself, and learns that fart sounds can be mistaken for speech. highly specific, i know, but not the game changing ...

c) Subtle or ambiguous

True: adhd Pred.: adhd (0.52) [correct]

There are moments where I actually appreciate some parts of the disorder, because I can have the most interesting conversations on it because of my insane empathy but on the other had I can't really chill without having ...

d) Subtle or ambiguous

True: ocd Pred.: ocd (0.53) [correct]

I very interesting meme. This does say about how we spend time, and what is the best method to use it.

e) Negation

True: ocd Pred.: ocd (1.00) [correct]

I bought the book "at last a life" a few weeks ago and it's completely changed my view of anxiety and how to live with it. I'm certainly not 100 yet but I'm a lot closer since reading.

f) Figurative-language candidate

True: ocd Pred.: ocd (1.00) [correct]

I don't have OCD but anxiety and I'm so paranoid of this, I keep checking to make sure I'm muted. Also, the damn camera. I hate that we have to turn it on during every class. It feels like an attack on my privacy

g) Failure case

True: ocd Pred.: adhd (1.00) [error]

I've been biting my skin as a **stim since I** was **capable of** it **and the worst part is I** do it for the feeling of the **flesh between my teeth and** not the **swallowing or** skin feeling; I've yet to find anything I could use to ...

h) Strong rationale effect

True: adhd Pred.: ocd (1.00) [error]

and they always come right as you're going to bed, or when you're stuck in class.

Darker shading denotes higher selector probability; outlined bold tokens form the deterministic top- ρ rationale.
